Components map: one scan, news to outreach

Rows are the actors, columns are the stages. Follow the numbers. Step 1 starts a scan on a schedule or from the dashboard; steps 2–8 read live news, judge it with Gemini Flash and score it in code; step 9 writes back without touching Arjun's data; steps 10–14 are what Arjun sees and chooses to send. Nothing is sent without his click.

Trigger · Input · Context · Processing (code) · AI (Gemini Flash) · Output · Human

Actor	Trigger what starts it	Input what comes in	Context what it knows	Processing rules in code	AI where a model works	Output what leaves
Vercel Cron scheduled jobs · vercel.json	1 **Daily scan 13:00 IST**, just after the Gemini quota resets. **Hot List** Mon & Thu 08:00 IST. /api/cron/scan · /api/cron/hotlist · CRON_SECRET					
Live news Google News RSS · GDELT		2 **5 queries per account**: hiring/expansion, leadership, funding, workforce, plain company news. Last 7 days (30 on first scan). lib/pipeline/fetch.ts · 1 pooled GDELT query				
Our server Next.js on Vercel (Tokyo)				4 **Prefilter, no AI**: dedupe URLs and near-identical titles, whole-word company match, exclude terms, already stored, cap 12, market chatter last. prefilter.ts · Licious ≠ "Mac-A-Licious" 6 **Cluster + score**: same event merges; age from first report; base × confidence × decay × stage; top 3, cap 100 → hot / warm / cool / quiet. score.ts · 25 unit tests 8 **Draft gate**: channel limits, banned phrases, trigger named, **every figure must exist in the sources** → regenerate once, else flag. draft-checks.ts		10 **Dashboard**: Today (5-second answer), account workspace, triggers, runs with a live integrity attack. pulse-ten-drab.vercel.app
Gemini Flash @google/genai · Flash model pool					5 **Classify**, 1 call per account: about this company? trigger? type, **verbatim evidence** (checked in code), confidence, event key. classify.ts · JSON schema + zod · retry once 7 **Brief, why-now, angle**, best contact, email + LinkedIn drafts, follow-up if unanswered; **digest** of Arjun's notes and open loops. enrich.ts · only when the top signal changed	
Supabase Postgres · RLS · guard triggers		3 **Arjun's accounts**: aliases, exclude terms (e.g. "Apollo Tyres"), stage, contacts, notes and reach-out history. **Read-only** to the pipeline. accounts · contacts · notes · activities				9 **Writes SYSTEM data only**: articles, signals, drafts, digests, scores. Hash of Arjun's data before = after, stored per run. apply_signal_update() · scan_runs
Resend Hot List · outreach email						11 **Hot List** to Arjun: top 10 by 72-hour signals, angle, source, deep link; follow-ups due; gone quiet. email_runs · Gmail-safe HTML 13 **Outreach email** after the confirm dialog; reply-to Arjun. **SAFE_MODE** redirects to the demo inbox. /api/send-email · 10 / hour
Arjun Enterprise Sales · dashboard	1b **Run scan now** from the top bar; live pipeline panel shows each stage. /api/scan · batches of 3 · 1 scan / 10 min					12 Reviews the draft, edits, picks the contact, then **one click to send**; logs calls and notes. His writes go through **his RPCs** only. log_activity · add_note · update_manual_fields
LinkedIn hand-off only · never automated						14 **Copy & open profile**; Arjun sends the note himself, then taps **Mark as sent**. no scraping · no automation

The rule: never overwrite Arjun

The pipeline writes **accounts** only through **apply_signal_update()**, which sets system columns. Guard triggers refuse any write to his fields, contacts, notes or history unless it comes from his own RPCs. A hash of all his data is taken before and after every scan; the Runs page re-attacks it live (7/7 blocked).

Why LinkedIn is hand-off only

LinkedIn's terms forbid scraping and automated messaging, and automation risks banning Arjun's account. Executive moves are caught through **news**; Pulse drafts the note within LinkedIn's 280-character limit, copies it and opens the profile. Arjun sends it and taps **Mark as sent**.

The Cut: AI judges, code decides

Gemini reads the news and writes; it never sets the score or sends anything. Warmth is a deterministic formula Arjun can open and check. Drafts that invent a figure, flatter, or skip the trigger are regenerated once and stay flagged. **SAFE_MODE** keeps every outreach email in the demo inbox.
